Education

City College of San Francisco

A.S. in Computer Science | GPA: 4.0 | Dean's Honor List (2024–2025)

Expected Transfer 2027

San Francisco, CA

Technical Skills

Languages: Java, Python, JavaScript, HTML/CSS

Tools & Platforms: Git/GitHub, VS Code, Framer, Autodesk Fusion 360, Bambu Studio, Android Studio, Google Cloud Platform

Concepts: OOP, UI/UX Design, Front-End Development, Digital Accessibility, CAD, Microcontroller Programming

Languages Spoken: English, Myanmar (Burmese)

Experience

MESA Prime Internship Prep – AI/ML and Engineering

Jun 2026 – Present

Intern

San Francisco, CA

- Taught myself CAD from scratch in Autodesk Fusion 360, building fully-constrained, parametric sketches and models. Designed and produced a phone stand and controller console for our team's location-detection machine, meeting all project requirements for a group engineering challenge.
- For the capstone project, I built a Rock-Paper-Scissors mini robot to support patients with hand injuries and stroke survivors doing home rehabilitation exercises, using MediaPipe gesture recognition, a microcontroller, and the Anthropic API to give real-time feedback on their recovery progress.

CCSF CS Department – CS Tutor Squad

Jan 2025 – Present

Computer Science Tutor & Online Grader

San Francisco, CA

- Tutored five peers individually each week in Data Structures, Algorithms, and core Programming concepts. Also graded assignments and provided written feedback, enabling students to identify and independently remedy recurring errors.

Volunteer Experience

San Francisco Public Library (The Bridge Main)

Apr 2025 – Present

Tech Tutor

San Francisco, CA

- Volunteered to provide technology instruction for individuals in under-served communities with limited computer and smartphone access, teaching classes on smartphone use, internet navigation, and online safety. Guided up to five adult students per week, primarily older adults, to build comfort with technology and achieve long-term digital independence.

Berkeley mini Math Tournament (BmMT) – UC Berkeley

Apr 2026

Event Volunteer

Berkeley, CA

- Selected to support a 1,000+ participant middle school math competition, proctored exams, distributed materials, and managed logistics, contributing to a smooth and welcoming experience for young students.

Projects

Focusify – AI Time Tracker | Angular, Node.js, Deepgram, Anthropic API | AI Berkeley Hackathon

Jun 2026

- Faced the challenge of building a complete productivity tool in 48 hours, shipped a full-stack time tracker with automatic browser and Mac app monitoring, voice logging via Deepgram STT and Anthropic API parsing, and an Apple Calendar-style day view with pinch-to-zoom.
- Created a Cross Platform Tracking solution with Secure Authentication during the Hackathon and built a Chrome MV3 Extension for Tab/Domain Monitoring, a macOS Menu Bar App for Focus Tracking, Voice Mutation Commands, and JWT + Google Sign-In all tied into a Shared Express/Redis Backend.

Barter – Sustainable Item Exchange Platform | JavaScript, HTML/CSS, GitHub | SF Hacks 2026

Feb 2026

- Tasked with reducing waste through free item trading in a 48-hour hackathon, owned all front-end and UX work – item listings, browsing, and trade flows – and delivered a responsive deployed prototype within the window.
- Responsible for team code stability, enforced Git branching and pull request workflows to prevent conflicts and keep the codebase deployable for the final demo.

SmartLeave – Java Leave Management System | Java | The Build Fellowship, Open Avenues

Jun – Aug 2025

- Assigned to automate leave approvals, built a Java app to handle requests, flag scheduling conflicts, and enforce Separation-of-Duties controls, eliminating manual errors.
- Faced recurring runtime bugs, led team debugging to find root-cause logic errors and refactored affected modules, producing a more reliable and maintainable codebase.
